

Benoit has created workflows to help clients proactively identify compliance issues and recover unclaimed value.

Our Integrated Compliance Management (ICM) Program combines the strength of our regulatory application, liability management ratio, land administration and evaluation services under one umbrella.

The program has expanded to include two new functions. We proactively search existing government data to identify potential compliance related issues and/or unclaimed royalty adjustments.

Compliance Monitoring

Our compliance monitoring process helps clients by analyzing well data and monthly production data to identify issues and proactively correct.

- Acquire well infrastructure and well production data from government sources
- Create reports consistent with AER compliance processes
- Analysis of data to identify potential compliance issues and outline recommendations
- Work proactively with the client to implement the agreed upon resolutions and ensure compliance

Royalty Optimization

Our royalty optimization process helps clients capture value by ensuring all available royalty incentive programs are fully utilized so our clients pay only their fair share.

- Review client's well listings and royalty statements from the Department of Energy
- Utilize data from Benoit's compliance processes to identify potential opportunities
- Identify potential issues and outline recommendations
- Work proactively with the client to resolve and recover previously unclaimed value from existing royalty programs
